Executive Summary

What this document covers and why it exists

InvestPuppy Pte Ltd is building two complementary portfolio management products under the **BY INVESTPUPPY** maker's mark. This document records the brand architecture of both products, the commercial rationale for maintaining them as distinct rather than expanding one, and the open decisions required before Tensor enters production. It is a living internal reference — not a client document and not for external distribution.

Vektor	Systematic listed equity portfolio management for boutique DPMs, IWMs, and family offices. Three delivery models. Distribution-ready. First Proof Partners being signed now. Addressable market: US\$15M ARR across three primary markets at 10% penetration.
Tensor	Institutional portfolio management platform built on the same codebase as Vektor. Native capabilities include systematic portfolio construction, performance attribution, and core corporate actions. Integrates with OMS and regulatory reporting solutions. Targets DPM desks at regional banks, large MFOs, and institutional asset managers. In development. Addressable market: US\$10M–US\$14M ARR direct subscription across three markets at 10% penetration, plus US\$12M+ via the Wrapped channel.
Combined TAM	Approximately US\$25M–US\$30M ARR at 10% penetration across Vektor and Tensor combined, across Singapore, UK, and Switzerland. The two addressable markets are largely non-overlapping.
Why two products	Expanding Vektor's scope to cover institutional requirements would dilute the boutique positioning, break the pricing architecture, and create conflicting sales cycles. Tensor is the correct structural response — same codebase, different scope, different client, different price. The naming architecture is mathematically coherent: vectors generalise to tensors.
Brand architecture	InvestPuppy is the parent. Vektor and Tensor are siblings, not tiers. Both carry the BY INVESTPUPPY maker's mark in identical grey treatment. Governing principle: "Honest by design."
Current status	Vektor: pre-revenue, first Proof Partner not yet signed. Tensor: brand in working direction (not locked), development timeline TBC. See Section 6 for full open items.

Functional scope note: capability descriptions and examples throughout this document — including references to order management, performance attribution, corporate actions, and regulatory

reporting — are illustrative of intended product direction. They do not constitute a committed functional roadmap, a product specification, or a contractual commitment. Tensor is in development; scope will be confirmed through the founding team's product planning process.

Version history

Version	Date	Status	Notes
1.0	18 May 2026	Initial draft	First full version
1.1	18 May 2026	Revised	Version history, status panel, open items, cover marks, Section 4 status label
1.2	18 May 2026	Revised	Exec summary, Avaloq, Vektor colour fix, Wrapped estimate, SE Asia note, conversion note, competitor table
1.3	18 May 2026	Revised	Title updated to Architecture. Functional scope note added. Risks section added. CEO disclosure tiers. OMS/reg reporting/corporate actions scope refined throughout.

Status at a glance — May 2026

Element	Status	Note

1. Current Brand Positioning

InvestPuppy as parent · Vektor as first product

InvestPuppy Pte Ltd is the company. **Vektor** is the product. Every product InvestPuppy builds carries the **BY INVESTPUPPY** maker's mark. InvestPuppy is not a product name and is not for sale. It is the name on the door.

InvestPuppy — the parent identity

Honest by design. This is not a marketing claim. It is a methodology: see it clearly, own it completely, ask what it gives you.

Brand voice	"Honest by design." Direct. Confident. Not performing institutional gravitas.
Visual identity	GREEN #85D155 · DARK #0A0A0A · Poppins typeface family
Strapline	"Serious when it matters."
Maker's mark	BY INVESTPUPPY — grey, all caps, Poppins Light. Consistent across all products.
Thought leadership	The Unvarnished series — 10 published papers on why financial software implementations fail

Vektor — the first product

Vektor is a systematic listed equity portfolio management platform for boutique DPMs, IWMs, and family offices. Three delivery models. One platform.

What Vektor is: Systematic signal application, 10,000 portfolio configurations per strategy, full audit trail, custodian-agnostic architecture.

What Vektor is not: A Bloomberg Terminal replacement. An enterprise PMS. A robo-advisory platform. A reporting layer on top of manual execution.

Three delivery models

- **Vektor : Boutique** — Direct subscription. AUM-tiered (US\$18,000–US\$175,000). Proof Partners programme for early-commitment clients.
- **Vektor : House** — Institutional subscription via Alloy Partners. Staged and gated. InvestPuppy screens and selects partners.
- **Vektor : Wrapped** — Licensed via custodian banks. CEO holds production OpenWealth API credentials across Tier 1 institutions globally.

Vektor pricing — confirmed May 2026

Entry (≤US\$55M) US\$18,000/yr

Growth (≤US\$185M)	US\$36,000/yr
Institutional (≤US\$550M)	US\$105,000/yr
Enterprise (US\$550M+)	US\$175,000/yr
Proof Partners (Tier A)	US\$13,500 Year 1 · 25% below standard ongoing
Proof Partners (Tier B)	35% below standard Year 1 · 20% below standard ongoing
Vektor : House (ACV)	US\$250,000 base — Stage 3 only, not public

2. The Challenge of Evolving Functionality

Why the current structure creates tension as the product matures

Vektor was designed with a precise scope. This precision is the product's commercial strength — it creates a coherent, defensible market position. As InvestPuppy grows, two forces create tension.

Force one — institutional client requirements

The **Alloy Partners** pathway brings institutional clients onto the platform. These clients require capabilities beyond systematic portfolio management:

- **Order workflow and OMS integration** — order routing and workflow with integration to the client's existing OMS infrastructure.
- **Performance attribution** — multi-factor attribution, benchmark comparison, formal institutional reporting.
- **Core corporate actions** — events with direct position or performance impact (see scope note).
- **Multi-asset class support** — fixed income, alternatives, structured products.
- **Regulatory reporting integration** — data and integration infrastructure feeding specialist regulatory reporting solutions.

Force two — the Vektor brand scope problem

Adding these capabilities to **Vektor** changes what Vektor is. Three specific risks:

- **Brand dilution:** The boutique practitioner feels the product has been repositioned around a different audience. The most common failure mode in B2B software.
- **Pricing incoherence:** Institutional OMS at boutique pricing is not sustainable. Institutional clients should pay US\$250,000–US\$400,000+ ACV.
- **Sales cycle conflict:** Boutique clients close in weeks. Institutional clients close in 12–18 months. Running both under the same product name dilutes the Proof Partner motion.

The structural conclusion: Vektor remains precisely what it is. Institutional clients who need order management workflow, performance attribution, and corporate actions handling need **Tensor**.

3. Commercial and Logical Rationale for Tensor

Why a separate PMS product — and why now

The mathematical case

A **vector** describes direction and magnitude. A **tensor** generalises a vector into multiple simultaneous dimensions. Vektor handles systematic listed equity construction. Tensor handles the portfolio management layer at institutional scale — order workflow, attribution, core corporate actions, multi-asset — integrating with the execution and compliance infrastructure that surrounds it.

Naming architecture: Vektor Tensor is the same product logic written in linear algebra. The mathematical coherence of the naming is a competitive asset.

Functional scope reminder: capability references in this section are illustrative of intended direction. See the functional scope note on page 2 for the full document-level qualification.

The commercial case

- **ACV expansion:** Vektor Enterprise peaks at US\$175,000. Tensor target clients should carry US\$250,000–US\$400,000+ ACV. Impossible under the Vektor pricing architecture.
- **Market separation:** Vektor targets boutique practitioners. Tensor targets institutional DPM desks, large MFOs, and institutional asset managers. Different procurement, decision-makers, sales cycles.
- **Natural conversion:** Vektor : House clients who grow AUM or add asset classes are the natural first Tensor clients. Vektor builds the relationship; Tensor scales it.

Competitive position

Platform	Indicative ACV	Gap vs Tensor
Advent Geneva / SS&C;	US\$100,000+	Built for fund administrators, not boutique-origin practitioners. Heavy SS&C; integration overhead.
Enfusion	US\$150,000+	Strongest at hedge fund scale; heavy implementation overhead; not designed for practitioner-origin boutique growth.
Charles River / BlackRock Aladdin	US\$250,000+	Enterprise-only; 12–18-month implementation; requires dedicated IT resource; not boutique-accessible.

Temenos TripleA Plus	US\$150,000–US\$400,000+	Strong in European private banking and wealth management; broad functionality but significant implementation complexity; less focus on systematic/algorithmic PM; expensive to maintain and upgrade. Actively improving its wealth management positioning.
Avaloq	US\$200,000–US\$500,000+	Core banking platform first, portfolio management second. Significant market presence in Switzerland and Singapore private banking. Strong custodian connectivity but heavy infrastructure overhead and vendor lock-in. Not designed for systematic/algorithmic PM. Long implementation cycles.
Bloomberg AIM/PORT	US\$30,000–US\$80,000	Analytics and reporting add-on to Terminal. Not a systematic execution platform. No native portfolio construction or core corporate actions handling.
Tensor (target)	US\$250,000–US\$400,000+	Institutional capability on practitioner-proven methodology. Conversion from Vektor relationship, not a cold sale. Systematic PM embedded by design.

Timing and sequencing

Tensor does not launch before Vektor's first Proof Partner is active. Sequence: Proof Partners Vektor live accounts Alloy Partners Stage 2 Tensor commercial conversations.

Dependency note: If the Vektor commercial launch is delayed, the Tensor timeline slides proportionally. Development timeline not yet formally specified — see Open Items, Section 6.

Addressable market — Tensor PMS

Tensor targets a distinct and materially larger revenue opportunity than Vektor. The institutional PMS client — a DPM desk at a regional bank, a large MFO, or an institutional asset manager — carries an ACV three to five times that of a Vektor : Boutique subscription. The addressable universe across the three primary markets is smaller in client count but significantly larger in revenue potential.

Market	Target profile	Estimated universe	10% penetration @ US\$300K ACV
--------	----------------	--------------------	--------------------------------

Singapore	Institutional DPM desks, large MFOs (>US\$500M AUM), EAMs needing full PMS	80–100 qualifying operations	US\$2.5M–US\$3M ARR
United Kingdom	Mid-tier DPM desks, post-MiFID II boutique institutions, large wealth managers	150–200 qualifying operations	US\$4.5M–US\$6M ARR
Switzerland	EAMs and IAMs needing portfolio management + attribution, private bank subsidiaries	100–150 qualifying operations	US\$3M–US\$4.5M ARR
Three-market primary	Direct subscription only	330–450 total	US\$10M–US\$14M ARR

Wrapped channel multiplier: The above table covers direct Tensor subscription only. If the Wrapped channel delivers two major custodian bank partnerships, each bringing 40 EAMs requiring full PMS capability at a Tensor Wrapped fee of US\$150,000 per year, the calculation is: $2 \times 40 \times \text{US\$150,000} = \text{US\$12M additional ARR}$. Adding this to the direct subscription market gives a total Tensor addressable of approximately **US\$22M–US\$26M ARR** at conservative assumptions. The Wrapped channel is excluded from the table above to keep primary market sizing independently defensible.

Relationship to Vektor TAM: The Vektor and Tensor addressable markets are largely non-overlapping. Vektor targets boutique practitioners (typically below US\$550M AUM). Tensor targets institutional operations that have outgrown boutique tooling or require attribution and order management capability from the outset. Combined three-market addressable across both products: approximately US\$25M–US\$30M ARR at 10% penetration.

Second-wave markets: The table covers Singapore, UK, and Switzerland as primary markets. Indonesia, Malaysia, Thailand, and the Philippines represent a subsequent expansion wave — institutional asset management is growing rapidly across Southeast Asia and tooling remains significantly more primitive than Singapore. The Wrapped channel through major Asian custodians is the natural entry mechanism for these markets rather than direct subscription sales.

4. Tensor — Brand and Positioning

Identity, visual system, and market position

WORKING DIRECTION — not formally locked. All specifications are subject to change pending: T1 (Vektor typeface confirmation), T2 (Tensor name lock), T6 (preferred concept formal lock). Do not treat anything below as production-ready.

“The institutional portfolio management platform for operations that cannot afford approximation.”

Tensor is positioned as the institutional operating layer — the tool for DPM desks, large MFOs, and institutional asset managers who need the full spectrum of portfolio management capability at the same quality standard Vektor delivers for systematic listed equity.

Core corporate actions: Tensor handles corporate actions events with direct position or performance impact — dividends, stock splits, rights issues, and mandatory events such as mergers, redemptions, and demergers. Excluded from core scope: optional or elective events requiring client instruction; complex events requiring specialist processing; and non-financial events with no position or performance impact — for example AGM notices. These exclusions reflect deliberate architectural design.

The conversion advantage: No competitor in the institutional PMS market can replicate the Tensor commercial motion. Tensor’s first clients are not cold sales — they are Vektor : House clients who have already adopted InvestPuppy’s methodology, trust the team, and are growing into institutional requirements. A conversion from an established relationship, not a new customer acquisition. This is a brand asset as much as a commercial one: it signals that Tensor clients are chosen, not simply sold to.

Preferred visual direction — Meridian Studio concept

Wordmark colour	Platinum #9EA8B3 — preferred, not locked
Z crossbar	Gold #C8A96E — same gold as Vektor V arrowhead
BY INVESTPUPPY	Grey — consistent with actual Vektor mark treatment
Typeface	Same family as Vektor (TBC — awaiting T1 confirmation)
Tagline direction	“Every dimension. Every decision.” (candidate — not locked)
Background	DARK #0A0A0A — Tier 1 full dark brand treatment

The gold Z crossbar — rationale

The gold crossbar through the central Z echoes the Vektor V arrowhead (also Gold #C8A96E). This creates a visible family link — platinum carries Tensor’s independent identity; gold marks the shared InvestPuppy accent both products carry.

Scale variants

- **Variant A — Full display (20px+):** Platinum wordmark + Gold Z crossbar + Grey BY INVESTPUPPY. Primary mark.
- **Variant B — Reduced small (12–20px):** Platinum wordmark only + Grey BY INVESTPUPPY. No crossbar.
- **Variant C — Monochrome:** White wordmark + White BY INVESTPUPPY. Not yet fully specified.

Governance note: Full mark at 20px and above; reduced mark below 20px. This rule must be documented and applied by everyone producing Tensor-branded materials.

Colour architecture — forward note

GREEN belongs to both InvestPuppy and Vektor. With a third product, a formal colour architecture decision will be required: does green belong to InvestPuppy specifically, or to Vektor? Resolve before a third product enters development.

5. Risks

Known risks and mitigations

This section documents known risks. Acknowledging them clearly is consistent with the governing principle.

R1 — Product boundary management

The boundary between Vektor and Tensor functionality must be actively governed. Multi-asset strategies could be argued for either product; without a clear decision framework, the boundary will be negotiated case-by-case under client pressure, diluting both products. **Mitigation:** Establish a product boundary framework before Tensor is commercially described. Criterion: institutional operations requirements (order workflow, full attribution, complex corporate actions) belong to Tensor. Boutique practitioner requirements belong to Vektor.

R2 — Team bandwidth and focus dilution

Five people carrying Vektor commercial launch, Tensor development, Alloy Partners, and investor relations simultaneously creates real execution risk across all streams. **Mitigation:** Sequence deliberately. Vektor Proof Partners must close before Tensor development is prioritised at scale. See Open Items P1 and P2.

R3 — Regulatory scope expansion

Tensor's order workflow and institutional client profile may trigger MAS or FCA licensing requirements the current entity does not hold. **Mitigation:** Legal review of Tensor's regulatory footprint must be commissioned before any commercial offer is made, in any market.

R4 — Competitive response

Announcing Tensor signals to Temenos, Avaloq, Advent, and Enfusion that InvestPuppy is entering institutional territory. Competitors may improve boutique offerings or price aggressively against Vektor to block InvestPuppy's institutional pathway. **Mitigation:** Manage the timing of Tensor's public announcement relative to Vektor's commercial launch. Vektor relationships should be established first.

R5 — Client confusion at the product boundary

A fast-growing Vektor client approaching institutional scale may resist moving to Tensor rather than seeing Vektor grow with them. **Mitigation:** Develop a conversion narrative before the first client reaches institutional scale. Frame Tensor as the institutional expression of the same methodology, not a different product.

R6 — Investor disclosure timing

Raising the seed round on a Vektor-only narrative and announcing Tensor post-close risks investor surprise. Introducing Tensor too early creates expectations the team may not meet on the projected timeline. **Mitigation:** Decide the investor disclosure posture for Tensor before the first investor meeting. This document is internal only for this reason.

R7 — Brand sequencing

Vektor establishes InvestPuppy in the market as boutique-focused. Tensor's institutional positioning must overcome that first impression. **Mitigation:** The BY INVESTPUPPY maker's mark and open architecture philosophy are the bridging elements. The narrative — Vektor proved the methodology at boutique scale; Tensor scales it to institutional operations — must be embedded from the outset.

6. Brand System Reference

Locked elements — do not change without founding team decision

All locked elements require a founding team decision to change and must be propagated across all documents, website, and admin portal.

InvestPuppy — parent (locked)

Primary green	GREEN #85D155
Dark ground	DARK #0A0A0A
Body typeface	Poppins (Light, Regular, Medium, Bold, Italic)
Strapline	"Serious when it matters."
Principle	"Honest by design."
Brand method	See it clearly. Own it completely. Ask what it gives you.
Maker's mark	BY INVESTPUPPY — grey, all caps, Poppins Light, tracked
Gold accent	#C8A96E — secondary system colour

Vektor — first product (locked)

Wordmark colour	Grey/white — thin geometric letterforms. Not green. Green belongs to InvestPuppy.
Wordmark	TBC typeface — thin geometric sans, light weight
Arrowhead	Gold #C8A96E — locked element
BY INVESTPUPPY	Grey — confirmed from actual mark
Delivery models	Vektor : Boutique · Vektor : House · Vektor : Wrapped
Tagline	"Honest by design."

Tensor — second product (working direction)

Primary colour	Platinum #9EA8B3 — preferred, not locked
Z crossbar	Gold #C8A96E — shared family accent
BY INVESTPUPPY	Grey — consistent with Vektor mark
Typeface	TBC — same family as Vektor

Voice direction “Every dimension. Every decision.” — candidate

Status In development — not for external use

Locked terminology

10,000 portfolio configurations Never: “Monte Carlo” or “simulations”

99.94% Never: “99.9%”

Preferential commercial terms locked for the duration Never: “permanently preferential”

Proof Partners Never: “Founding Mandate Programme” or “early adopters”

Has not yet executed in a live account Never: “simulation mode”

Boutique wealth practitioners Never: only “family office investors”

Vektor : Boutique / House / Wrapped Space before colon — always

7. Open Items and Decisions Required

What needs to happen next — founding team decisions

This section tracks decisions required before Tensor brand and product work can progress. CRITICAL items gate all downstream work.

Tensor brand open items

#	Item	Priority	Detail
T1	Vektor typeface confirmation	CRITICAL	Actual typeface in Vektor production mark is unconfirmed. Josefin Sans Light used as working approximation. Gates all Tensor wordmark production work.
T2	Tensor name lock	HIGH	Tensor is working name; shortlisted with Vertex and Kern. Confirm before investing further in brand execution.
T3	Two-variant system governance	HIGH	Who owns the usage rule? How is it enforced as the team grows?
T4	Monochrome variant specification	MEDIUM	Variant C (white on dark) not yet specified. Needed for legal documents and single-colour print.
T5	Minimum clear space rule	MEDIUM	Convention: cap-height on all sides. Not yet formally specified.
T6	Preferred concept formal lock	HIGH	Dan has expressed preference for Meridian concept (platinum + gold Z). Not formally locked.
T7	Voice direction decision	MEDIUM	"Every dimension. Every decision." is a candidate tagline. "For institutions that cannot afford approximation." is the positioning statement. Neither formally adopted.

Product and commercial open items

#	Item	Priority	Detail
PI	Tensor development timeline	HIGH	No formal development roadmap. Is this a 12-month or 24-month build? Does it require additional engineering resource?

P2	Team and resource for Tensor	HIGH	Confirm whether current team builds Tensor or whether new hires are required alongside the Vektor commercial launch.
P3	Vektor : House Tensor relationship	HIGH	Two options: (a) House converts to Tensor at a defined trigger; or (b) they co-exist as separate institutional options. This shapes the entire commercial architecture.
P4	Tensor pricing logic	MEDIUM	US\$250,000–US\$400,000+ ACV stated without supporting rationale. How was this range derived?
P5	Long-term colour architecture	MEDIUM	GREEN belongs to InvestPuppy and Vektor. What happens with a third product? Resolve before third product enters development.

CEO background — disclosure tier framework

INTERNAL ONLY. The following framework must not be reproduced in any external document.

Premature disclosure of the CEO background at Tier 2 or Tier 3 specificity would make him identifiable in the market even without disclosing his name.

Tier	Context	Approved language
Tier 1	Public / all external documents, website, investor pack	Institutional wealth management technology experience at enterprise scale.
Tier 2	NDA context — qualified investor or partner under NDA	Extensive experience as a vendor and implementation specialist for a leading institutional portfolio management platform, including solution architecture for Global Tier 1 bank deployments.
Tier 3	Internal only — this document and founding team	CEO has worked with Temenos TripleA Plus since its commercial launch in 1997, from vendor, implementation, and solution architecture perspectives, including multiple Global Tier 1 bank projects. This provides InvestPuppy with competitive intelligence on its primary European competitor that is not available to most market entrants.

Competitive intelligence note: The CEO's Tier 3 background in Temenos TripleA Plus provides InvestPuppy with first-hand knowledge of TripleA's architectural limitations, implementation failure modes, commercial pricing dynamics, and client relationship patterns. This directly informs Tensor's product design decisions and competitive positioning. The detailed competitive characterisation of Temenos TripleA Plus in Section 3 reflects this insider knowledge, not external research.

Temenos competitive gap note: Temenos is actively investing in its SaaS transformation and wealth management capabilities. The competitive gap between Tenzor and TripleA Plus should not be assumed to be static. Monitor Temenos product announcements as part of ongoing competitive intelligence.

“Honest by design.”
