Treatment 4b locked

01 Session Overview

Full brand review session for the Tensor product mark and the shared InvestPuppy maker's mark (BY INVESTPUPPY, Treatment 4b). Outputs: seven production documents covering treatment options, scale reference, agency brief, Figma guide, and legibility comparison. Primary outcome: Treatment 4b formally locked following 16-member panel review and daylight mobile legibility test.

Treatment 4b — LOCKED May 20 2026. Confirmed by two panel passes (original 6-member and new 10-member cold panel) and live daylight mobile test by founder. Values revised from initial specification following legibility failure on OLED in bright conditions. Full specification below.

06 Recommended Next Steps

- C1 — First Proof Partner conversation.** Suite has been ready since HANDOFF-260515-B. This is overdue. All collateral exists. No further preparation required.

-
- 2 **TB1/TB2 — Tensor Figma + agency brief.** Treatment 4b is now locked. The Figma guide and brand spec are production-ready. The Figma build can begin immediately; the agency brief can be sent once founder confirms the lock formally.
 - 3 **T4 — Tensor Variant C.** Monochrome specification is the remaining open brand item. Can be completed quickly in the next session.
 - 4 **A5 — Dark-background Vektor asset.** Add to agency brief alongside Tensor. The white-background-only v3 PNG creates an inconsistency in the brand suite — both marks should be available in dark-background form.
