

VEKTOR : HOUSE · INSTITUTIONAL SCALE

Alloy Partners

The institutional development partnership programme for DPM desks, institutional family offices, and mid-size asset managers who will co-design the Vektor : House architecture.

We are building the institutional path. We have the solution roadmap. We are looking for the right partner to get us there.

InvestPuppy · IP-ALP-260515-1.0 · May 2026

TOO SMALL TO FAIL.

That's not a risk. It's our commitment.

We are a small founding team. That means every engagement we take on must work — we have no organisational scale to absorb a failed institutional partnership. That is not a weakness. It is the structural reason our commitment to each Alloy Partner is absolute.

Implementations that fail do not fail cheaply. We have documented that in ten papers under our own name. We will not be the subject of an eleventh.

We work with a small number of Alloy Partners because the quality of the engagement matters more than the number. We will not commit beyond what we can support. We will not advance an engagement to a stage we cannot deliver. We will tell you when our capacity is at its limit. An overcommitted vendor is a risk to the partner, not just to InvestPuppy. Honest scoping protects both sides of the engagement.

WHAT ALLOY MEANS

Two things combined into something neither could build alone.

An alloy is created by combining two materials into something with properties neither possesses alone. The alloy cannot be un-alloyed — what is made is permanent.

InvestPuppy brings the platform architecture: three years of development, eleven white papers, a complete eleven-step workflow from screening to execution, and an institutional deployment architecture already designed.

The Alloy Partner brings institutional knowledge: compliance framework requirements, integration specifications, governance workflows, data governance requirements, and the operational reality of running mandates at institutional scale.

What is built together is the Vektor : House path. Neither party could build it without the other. This is not a vendor relationship. It is co-authorship of the institutional architecture.

WHAT BOTH PARTIES BRING AND RECEIVE

The Alloy Partner receives	InvestPuppy brings and receives
— Direct founding team access — not a sales representative or support queue. Questions about methodology, architecture, and roadmap answered by the people who built it.	— Institutional validation — a committed Alloy Partner is evidence the platform is credible before the institutional live track record is established.
— Formal co-design of the integration architecture. Your compliance framework, reporting infrastructure, and governance requirements shape what gets built.	— Architecture requirements and compliance framework knowledge that makes Vektor : House genuinely fit for purpose.

— Proof of concept on your own mandate data — any listed equity market, any currency, any benchmark.	— Integration specifications that make subsequent House deployments faster, better, and less expensive.
— Pioneer commercial terms reflecting the co-design contribution and commitment timing.	— A reference that changes the commercial story at every tier — boutique, investor, and press.
— First-mover positioning on the institutional path. Partners who arrive later inherit the architecture you shaped.	— An investor story: multi-segment design validated by a real institutional buyer. Categorically different from a boutique-only track record.
— A platform built around your operational requirements — not one you are retrofitting your operations to accommodate.	

Staged. Gated. Structured.

The Alloy Partners programme is staged and gated. Each stage has defined deliverables and a defined trigger for advancement. InvestPuppy advances one institutional partner through Stage 2 at a time. This is not a resource constraint we apologise for — it is the structural guarantee that the engagement receives the attention it requires.

STAGE 1

Initial conversation and NDA

We begin with a scheduled founding team call — not a generic 48-hour response. We understand your operation: mandate structure, markets, existing infrastructure, governance requirements. You understand ours: where the platform is, what the institutional path involves, what co-design means in practice. We sign a mutual NDA. If there is fit, we proceed to Stage 2.

■ Low resource · Can run in parallel with boutique Proof Partner activity

STAGE 2

Proof of concept and integration architecture scoping

We run the full Vektor workflow on your mandate data. You assess the methodology, the output, and the platform's fit with your operational requirements. Simultaneously, we conduct a structured integration architecture assessment: your compliance stack, reporting infrastructure, data governance requirements, and RBAC framework. Both parties contribute to a documented integration architecture. This is the work that makes the institutional path real.

■ Significant resource · One Alloy Partner at Stage 2 at a time · Capacity gate applies · Boutique Proof Partner programme must be active before Stage 2 begins

STAGE 3

Commercial negotiation and partnership terms

By Stage 3, both parties have reviewed the methodology, validated the proof of concept, and contributed to the integration architecture. The commercial negotiation is between two parties who know exactly what they are agreeing to. Pioneer commercial terms reflect the co-design contribution, the commitment timing, and the length of the relationship.

■ Follows Stage 2 completion

On commitment and capacity: We will not commit beyond what we can support. We will not advance an engagement to a stage we cannot deliver. We will tell you when our capacity is at its limit. This is built into the programme structure, not managed informally. Honest scoping protects the engagement for both sides.

Honest about where we are.

This is the honest description of the Vektor : House development status. Every claim Vektor makes deserves documentation. Every limitation deserves disclosure before you ask.

LIVE TODAY	BEING BUILT WITH ALLOY PARTNERS
✓ Complete eleven-step portfolio management workflow	● Institutional RBAC and maker/checker workflow
✓ Any listed equity market, any exchange, any currency	● External PMS integration via API
✓ Multiple concurrent mandates with per-mandate benchmarks	● Live market execution (IBKR)
✓ 10,000 portfolio configurations per strategy	● Client reporting portal
✓ 99.94% capital allocation efficiency	● Institutional SLA and named account management
✓ Full audit trail and compliance documentation	● Hybrid identity vault deployment
✓ Hybrid identity vault architecture designed	

The platform is built and running. The Vektor : House institutional deployment path is being built alongside the first Alloy Partner. The methodology is documented across eleven white papers. The architecture is designed. The integration work requires a partner to build it with. That is who we are looking for.

Data governance: Vektor : House offers two deployment configurations. Standard: client data held in InvestPuppy's cloud under an institutional DPA with full audit rights. Hybrid: client identities never enter InvestPuppy's systems — held in a client-controlled identity vault. InvestPuppy can state: "We have never seen your clients' names." The configuration is determined during scoping. See the delivery models reference document for full data governance detail.

To begin the institutional evaluation, contact InvestPuppy at contact@investpuppy.com or via investpuppy.com/alloy-partners. InvestPuppy reviews all institutional enquiries before responding. We will arrange a scheduled founding team call — not a generic acknowledgement. We are assessing fit as carefully as you are.
