

Giving wealth teams the quantitative infrastructure that institutional asset managers take for granted.

Without the cost, the complexity, or the minimum AUM.

Listed equities. Any exchange. Any currency. Any number of concurrent mandates. We will tell you what Vektor does not yet do before you ask.

THE PROBLEM	THE PLATFORM	THE RESULT
Institutional-grade quantitative tools — portfolio optimisation, systematic signals, rigorous backtesting — require institutional infrastructure, headcount, and budgets. Independent wealth teams are left with Excel or retail robo-tools. Neither is adequate.	Vektor is an eleven-step systematic portfolio management platform. It screens equity universes, generates 10,000 portfolio configurations to map the efficient frontier, applies Modern Portfolio Theory to identify the max-Sharpe allocation, selects per-instrument signals, allocates at live prices, and produces a fully auditable, trade-ready position set. Any listed equity market. Any currency.	A quantitatively constructed, genuinely diversified, compliance-ready portfolio — from first client meeting to funded positions — in a fraction of the time. Any listed equity market. Any currency. Any number of concurrent mandates.

10,000 portfolio configurations per strategy Efficient frontier mapped across 10,000 portfolio configurations. MPT selects max-Sharpe.	99.94% capital allocation efficiency Of target allocation deployed. The gap between weight and position is drag. Vektor eliminates it.	6 signals per instrument Per-stock optimised indicators. Grid search across 6 indicators × 3 years. Best Sharpe wins.	3 yrs daily data, refreshed daily Current signals, not stale history. Of price data updated every day. Signal selection reflects the market.
---	---	--	---

01	Every holding gets its own optimised signal.	Grid search across 6 indicators × 3 years. Best Sharpe wins.
02	Diversification is verified, not assumed.	Full correlation matrix before every strategy is locked.
03	Full transparency before a single order is placed.	Instruments, weights, indicators, Sharpe — all visible pre-approval.
04	Capital deployed with precision, not approximation.	Live prices. Lot-rounded. 99.94% efficiency. Every time.
05	Any market. Any currency. Any number of mandates.	Configure exchange, benchmark, currency. Engine does the rest.

Show us a mandate. We'll show you the platform.

Pick any listed equity market, any currency, any benchmark. We will run the full Vektor workflow on your data and show you the output. No slides. No promises.

Founding Mandate Programme — currently onboarding a small number of wealth teams managing listed equity mandates. Preferential commercial terms locked for the duration of the relationship. Direct access to the founding team. Availability limited.
