

VEKTOR RESEARCH SERIES · 2026

Research Series Index

*Ten white papers covering the methodology, infrastructure,
and compliance architecture of the Vektor platform.*

For professional and institutional investors only

May 2026

SERIES OVERVIEW

These ten papers exist because every claim Vektor makes deserves documentation. If a question about the platform's methodology is not answered here, it should be — and we would like to know. The series covers every major component of the platform: foundational portfolio construction methodology, per-instrument signal selection, capital allocation precision, multi-currency infrastructure, compliance architecture, technical infrastructure, AI governance, risk disclosure, and performance evaluation. Each paper is self-contained and can be read independently.

REF	DOCUMENT	DESCRIPTION	RECOMMENDED FOR
WP-01	Quantitative Portfolio Construction for Single-Country Equity Markets	The foundational paper. A replicable five-stage framework — universe screening, 10,000 portfolio configurations mapping the efficient frontier, and benchmark validation — illustrated with a worked SGX implementation.	<i>DPMs, family office analysts, institutional allocators</i>
WP-02	Per-Instrument Signal Optimisation & XGBoost Validation	How Vektor selects the optimal technical indicator for every individual holding through a grid search across six indicators — and how XGBoost validates every live signal before execution.	<i>Quant analysts, systematic traders, technical DPMs</i>
WP-03	Capital Allocation Precision: From Weights to Positions	How percentage weights become actual share quantities at live prices. Lot size rounding, cash buffer configuration, and how 99.94% capital allocation efficiency is achieved and verified.	<i>DPMs, operations teams, family office managers</i>
WP-04	Technical Indicator Selection: Grid Search Methodology	A practitioner's guide to systematic parameter optimisation. Full parameter space specification, Sharpe ratio as objective function, three-year look-back rationale, and overfitting controls.	<i>Quant analysts, risk managers, systematic traders</i>
WP-05	Multi-Currency Portfolio Infrastructure	Daily FX rate collection, position-level currency conversion, per-client base currency configuration, and generalisation to any market and currency pair.	<i>Multi-mandate family offices, cross-border DPMs</i>

REF	DOCUMENT	DESCRIPTION	RECOMMENDED FOR
WP-06	Audit Trail & Compliance Architecture	The three-role accountability structure, complete action logging across all eleven workflow steps, and how Vektor produces an institutional-grade audit trail as a by-product of normal platform operation.	<i>Compliance officers, institutional due diligence teams</i>
WP-07	Production Infrastructure: The Vektor Technical Architecture	The AWS services, architectural decisions, and design principles behind the Vektor platform — documented as a record of choices made. Includes integration architecture for PMS connectivity, region-agnostic deployment, and current deployment status.	<i>CTOs, technical due diligence teams, institutional partners</i>
WP-08	AI as Instrument: Machine Learning in Systematic Portfolio Management	Where ML is used in Vektor, where it is not, human approval gates at every decision point, model governance framework, and alignment with MAS FEAT principles for responsible AI in financial services.	<i>Compliance officers, risk committees, institutional due diligence</i>
WP-09	Risk & Limitation Disclosure	Fourteen identified risks across four categories — data, methodology, operational, and regulatory — with mitigations currently in place and those on the near-term roadmap. Read before any risk committee or compliance presentation.	<i>Due diligence teams, risk committees, compliance officers</i>
WP-10	Evaluating Systematic Strategy Performance	A framework for evaluating the outputs of a systematic platform. Sharpe ratio, drawdown, benchmark comparison, signal decay analysis, and walk-forward validation methodology. Essential reading before reviewing any Vektor strategy output.	<i>DPMS, family office analysts, CIOs, investment committees</i>
