1. Executive Summary

InvestPuppy is building **Vektor** — a systematic listed equity portfolio management platform for boutique discretionary portfolio managers, independent wealth managers, and family offices. One product. Three delivery models. **Honest by design.**

Vektor is one platform available through three delivery models: direct subscription for boutique practitioners (**Vektor : Boutique**), direct institutional subscription (**Vektor : House**), and licensing through custodian banks for their EAM client base (**Vektor : Wrapped**). Methodology, signal generation, and audit trail are identical in every deployment.

Raise US\$1.5M – US\$2.25M

Pre-money US\$6M – US\$10M

Stage Pre-revenue · building toward first Proof Partner

Primary market Singapore · 2,000+ single family offices (MAS, 2024)

Revenue model AUM-tiered SaaS + institutional licence + per-mandate fee

Year 5 ARR US\$2.52M (base) · US\$1.25M (bear) · US\$4.25M (bull)

EBITDA positive Year 3 · base case

Team CEO + CTO (co-equal, decade together) + 3 pre-launch collaborators

2. Team

Five people. Decades of institutional experience. One conviction.

Note: Founder names are placeholders in this version of the memo. Full team biographies are available in the NDA version.

CEO

[CEO name] — Co-equal founder. Spent [X] years in institutional wealth management and technology implementation across [institution types], with direct experience of the operational failures the Unvarnished series documents. Holds a production OpenWealth API implementation credential across Tier 1 custodian institutions in Europe, the Middle East, and Asia Pacific — a live relationship infrastructure that is the commercial foundation of the Vektor : Wrapped channel. Disclosed in full under NDA.

CTO

[CTO name] — Co-equal founder. Architect of the Vektor platform. [X] years building systematic portfolio construction and quantitative methods at [institution type]. Responsible for the platform's core methodology: the signal generation engine, the 10,000-configuration optimisation framework, and the audit trail architecture that makes every decision transparent to regulators and clients. *"I could not have done it without him. He could not have done it without me."* — CEO

Pre-launch team (three collaborators)

Three senior professionals with decades of shared institutional experience in wealth management, technology implementation, and compliance. All bound by NDA and the same founding conviction: *"there has to be a better way."*

The five-person team was built before the raise. This is not a team assembled to chase funding — it is a team that has been doing the work.

3. The Problem

Why boutique practitioners need a better tool — and why nobody has built one

The Bloomberg Terminal costs approximately US\$32,000 per seat per year. It was built for sell-side research and market data distribution. It is not a portfolio management tool. Boutique discretionary managers and family offices have been using it as one — expensively, incompletely, and without audit trail — because there was nothing else.

The alternative is manual: spreadsheets, ad hoc rebalancing tools, and fragmented systems that make systematic portfolio construction time-consuming and error-prone. Compliance and audit requirements grow while tools do not.

The incumbent platforms — Bloomberg, Advent, Iress — are scaled for large institutions. Their pricing, implementation requirements, and architecture assumptions exclude the boutique practitioner. This is not an oversight. It is a rational commercial decision by vendors serving large clients.

Three specific failure modes

- **Signal application is manual.** Translating a systematic view into portfolio actions requires human judgment at every step. This is not risk management. It is friction.
- **Rebalancing is not systematic.** Without a platform that can generate 10,000 portfolio configurations per strategy, portfolio construction defaults to heuristic approximation.
- **Audit trail is incomplete.** MAS and regulatory requirements assume documented rationale for every decision. Manual workflows cannot produce this reliably.

The Unvarnished series — 10 published papers on why financial software implementations fail — addresses this directly. These are the field notes from the rooms where the same projects failed for the third time. Available at investpuppy.com/unvarnished.

4. The Platform — Vektor

Systematic listed equity portfolio management

Vektor is a systematic portfolio management platform. It generates **10,000 portfolio configurations per strategy**, applies signals systematically, produces a complete audit trail, and integrates with custodian infrastructure. It is not a reporting tool layered on top of manual execution. It is the execution layer.

Core capabilities — identical across all three delivery models

- **10,000 portfolio configurations per strategy** — systematic signal application at institutional quality.
- **Full audit trail** — every rebalance, every override, every decision. Transparent to regulators and clients.
- **Multi-custodian mandate management** — independent sub-accounts sharing a common strategy.
- **Order routing** — automated (IBKR) or manual (any custodian, EAM records fill).
- **99.94% uptime commitment.**
- **RBAC and maker/checker workflow** — institutional-grade access controls.

Platform status

- Systematic signal generation and portfolio construction: live.
- IBKR integration in place. **Has not yet executed in a live account.**
- Audit trail and reporting: complete.
- Multi-custodian mandate management: in build.
- Proof Partners programme: open for first commercial conversations.

Live execution target [provisional]: First live account execution is targeted within three months of first Proof Partner onboarding. This timeline is a planning assumption and will be confirmed once the Proof Partner programme is active.

Delivery model ≠ product quality. The platform is identical in Vektor : Boutique, Vektor : House, and Vektor : Wrapped. The delivery model describes how it reaches the client, not what they receive.

Data governance: Every deployment model operates under a defined data processing agreement. Vektor : Boutique — InvestPuppy holds client portfolio data under DPA, MAS TRM framework referenced. Vektor : House — standard cloud or hybrid deployment; no client identity data in cloud on hybrid. Vektor : Wrapped — InvestPuppy holds no EAM client PII by structural design. Full data residency and privacy architecture: *ip-data-residency-privacy.pdf* — available on request.

Why methodology matters — and why it cannot be quickly replicated

There will be platforms that look like Vektor. Some already exist in adjacent form. The practitioners who know this market — who have lived through the implementations that did not work and have the audit trail gaps to prove it — will be able to tell the difference. The methodology behind Vektor is documented across eleven technical white papers. The signal generation architecture was built by someone who has operated systematic portfolios at institutional scale. The custodian credentials are production-grade and live. The failure modes this platform was designed to avoid are published under our own name. These things take years to build. They cannot be assembled quickly by someone who has identified a market gap. The market for portfolio management software has never lacked for vendors. It has lacked for vendors who understand the difference between what they built and what practitioners actually need.

5. Business Model

Three revenue streams — one product

Vektor : Boutique — AUM-tiered annual subscription

Direct subscription to boutique DPMs, independent RIAs, and family offices. Pricing is published openly and held consistently. Early-commitment Proof Partners receive a preferential Year 1 rate, followed by a permanently locked discount from standard pricing for the duration of the relationship.

Tier	AUM	USD/year	Note
Proof Partners	Any	US\$13,500	Year 1 rate · preferential terms locked for the duration
Entry	≤US\$55M	US\$18,000	
Growth	≤US\$185M	US\$36,000	
Institutional	≤US\$550M	US\$105,000	
Enterprise	US\$550M+	US\$175,000+	Pricing on request
<i>Bloomberg Terminal</i>	—	~US\$32,000	<i>Reference only — market data, not portfolio management</i>

All prices USD. Non-USD currencies available on request. Proof Partners: preferential commercial terms locked for the duration — permanently discounted from standard tier pricing, agreed at signing.

Vektor : House — Alloy Partners programme

Institutional subscription for DPM desks at regional banks, MFOs, and large independent managers. The **Alloy Partners** programme is **staged and gated** — InvestPuppy screens and selects partners. Both parties are assessing fit.

Stage 1 — open now: Initial conversation and NDA. Low resource. Parallel to boutique activity.

Stage 2 — gated: Proof of concept on the partner's own data + integration architecture scoping. Capacity-gated: maximum one Alloy Partner at Stage 2 at any time. Begins once first Proof Partner is active.

Stage 3 — commercial: Commercial negotiation and partnership terms. Follows Stage 2.

Too small to fail. One Stage 2 partner at a time. Honest capacity management. No overselling. Implementations that fail do not fail cheaply — we have documented that in ten papers. We will not be the subject of an eleventh.

InvestPuppy licenses Vektor to custodian banks and wealth platforms for distribution to their EAM client base. The bank is the commercial counterpart. EAMs are end users — their capability is identical to Boutique and House clients.

- **Platform licence fee** per partner per year.
- **Per-mandate fee** for each EAM mandate managed on the platform.

The CEO credential: Production OpenWealth API implementation across Tier 1 custodian institutions in Europe, the Middle East, and Asia Pacific — disclosed under NDA. This is not a planned integration. It is a live credential built over years of institutional relationship work. It means InvestPuppy can initiate the Wrapped channel conversation at the infrastructure level before most competitors can get a meeting with the right counterpart. It is the primary reason the Wrapped revenue stream is modelled as near-term rather than speculative.

6. Go-to-Market

Proof Partners first, then institutional and Wrapped in parallel

Immediate priority — Proof Partners

The **Proof Partners** programme is the boutique go-to-market. Three Proof Partner slots available at the US\$13,500 founding rate. Suite is distribution-ready. First conversations beginning now.

- **Year 1 rate:** US\$13,500 (firms below US\$55M AUM) or 35% below standard tier (firms above US\$55M AUM).
- **Preferential terms locked for the duration** — permanently discounted from standard tier pricing at each renewal, agreed at signing.
- **Founding team access** — CEO and CTO present in first implementation weeks.
- **Named as a Proof Partner** — first-mover recognition.

Institutional — Alloy Partners

Institutional sales cycles run 12–18 months minimum. Active engagement must begin before the product is fully built. Stage 1 conversations (NDA + initial call) are open now in parallel with boutique activity.

Distribution

- **Singapore:** Primary market. 2,000+ single family offices (MAS, 2024). Distribution-ready.
- **Switzerland:** Near-term expansion. FinIA compliance. OpenWealth infrastructure established with Tier 1 custodians.
- **UK:** FCA regulatory opinion planned within 12 months. Distribution begins post-clearance. Timeline will be escalated if required for a UK-based Proof Partner.
- **DIFC / UAE:** On first qualifying conversation.

7. Market

Boutique practitioners are systematically underserved

The addressable market is not enterprise wealth management. It is the boutique end — DPMs managing US\$20M–US\$500M, independent RIAs, single family offices and MFOs, and EAMs operating through custodian banks. These practitioners have institutional-quality investment processes but consumer-grade tooling.

- Singapore: **2,000+ single family offices** (MAS, 2024) plus boutique DPMs and IWMs — primary market, distribution-ready.
- Switzerland: established EAM and IAM market with strong OpenWealth infrastructure adoption. Near-term expansion.
- UK: growing boutique DPM segment post-MiFID II unbundling. FCA regulatory opinion planned within 12 months — distribution begins post-clearance. Timeline will be escalated if required for a UK-based Proof Partner. UK practitioners may engage in pre-distribution conversations in the interim.
- SE Asia broadly: emerging market asset manager growth and increasing compliance requirements. A successful Wrapped channel through major Asian custodians would extend Vektor's reach to EAM markets across the region — downstream impact that scales with custodian adoption rather than direct sales effort.

Addressable market — indicative sizing: Singapore alone — 2,000+ SFOs plus the boutique DPM and IWM population — represents an annual addressable subscription market of approximately **US\$5M–US\$8M at 10% penetration** across pricing tiers. Adding Switzerland and UK at conservative entry-level penetration brings the three-market primary addressable to approximately **US\$15M ARR**. The Wrapped channel is a separate and multiplicative layer: each bank partner brings a portfolio of EAM mandates generating subscription revenue that would otherwise require individual direct client relationships.

InvestPuppy does not position Vektor against Bloomberg. **Bloomberg Terminal, Bloomberg PORT, and Bloomberg data feeds are three separate products with three distinct competitive positions.** Vektor competes for the systematic portfolio management workflow — a gap the Terminal does not fill and PORT prices out of the boutique segment.

Competitive landscape

The direct competitive set for systematic portfolio management at boutique scale is thin. This is part of the opportunity.

- **Iress / XPLAN** — strong in UK and Australia, primarily execution and reporting, not systematic signal-to-portfolio construction. Priced for mid-size firms upward.
- **Advent Geneva / SS&C** — institutional portfolio accounting. Expensive, complex implementation, built for fund administrators not boutique DPMs. Entry-level pricing starts above US\$100,000/year.

- **Enfusion** — cloud-native PMS, strongest at hedge fund scale. Growing in wealth management but primarily institutional. Pricing is AUM-linked and typically exceeds US\$150,000/year for the target Vektor client profile.
- **Bloomberg PORT** — portfolio analytics add-on to Terminal. Adds US\$6,000–US\$25,000 on top of the US\$32,000 Terminal cost. Analytics only — not systematic execution or audit trail.
- **Locally-built SGX tools** — a small number of Singapore-specific portfolio tools targeting SGX-listed equities exist in the market. None offer systematic multi-mandate construction, full audit trail, or custodian-agnostic architecture.
- **Spreadsheet + manual workflow** — the de facto standard for boutique practitioners. No audit trail. Not systematic. Compliance risk increasing. This is the largest addressable segment.

Vektor's position: Below the pricing floor of institutional PMS platforms. Above the capability ceiling of spreadsheet workflows. Purpose-built for the boutique practitioner segment that incumbents have rationally chosen not to serve.

8. Financial Projections

Base case — three-stream revenue model (USD)

Revenue begins with Proof Partners and first Entry clients in Year 1. Boutique scale drives Years 2–3. First House commercial client targets Year 3. First Wrapped partner targets Year 3. Base case reaches EBITDA positive in Year 3. Full financial model available in *ip-investor-model.xlsx* — three scenarios.

	Year 1	Year 2	Year 3	Year 4	Year 5
Boutique ARR	\$77K	\$167K	\$398K	\$763K	\$1,310K
House ARR	—	—	\$250K	\$500K	\$750K
Wrapped revenue	—	—	\$230K	\$230K	\$460K
Total ARR	\$77K	\$167K	\$878K	\$1,493K	\$2,520K
EBITDA	(\$494K)	(\$461K)	\$154K	\$627K	\$1,477K
EBITDA margin	n/m	n/m	18%	42%	59%

Base case shown. Bear case: first House Year 4, first Wrapped Year 5, slower boutique ramp. Bull case: first House Year 3, two Wrapped partners Year 4. Costs scale at +10% p.a. Year 12, +15% Year 23, +20% thereafter. See *ip-investor-model.xlsx* for full assumptions.

Use of proceeds

Five-person team (salaries + benefits)

US\$420K/yr · Year 1 base

Infrastructure (AWS, tooling)

US\$36K/yr

Legal + compliance (SG, CH, UK)

US\$60K · primarily Year 1

Sales + marketing

US\$30K/yr · growing with traction

Runway

18–24 months to first House commercial

9. The Raise

Target	US\$1.5M – US\$2.25M
Pre-money	US\$6M – US\$10M (defensible with two-channel story and team credentials)
Structure	Quiet raise · 3–5 investors · boutique wealth practitioners or fintech-experienced angels with wealth management backgrounds
Compatibility	Stealth-compatible · founders currently employed
Use of proceeds	5-person team · institutional sales runway · legal infrastructure · product build
Runway	18–24 months to first House commercial · first Wrapped partner active
Milestones	First Proof Partner · first House Stage 2 · first Wrapped commercial

The ideal investor

The ideal investor for this round is a boutique wealth practitioner — whether managing a family office, a discretionary portfolio management firm, an independent wealth management practice, or a multi-family office — who faces the tool gap Vektor is built to close. Such an investor brings more than capital — they bring the most valuable thing a pre-revenue platform can have: a credible, operationally experienced voice within the target market with a direct stake in the platform's success. InvestPuppy is not simply seeking capital. It is seeking investors who are also, in the fullest sense, constituents of the market it serves.

Ring-fencing: Investment terms and subscription pricing are entirely separate and neither confers benefit on the other. A family office that invests in InvestPuppy and subscribes to Vektor does so on the same commercial terms as any other client. The alignment is operational and reputational — not financial.

What the raise buys: Time. The boutique channel can begin generating revenue within 6 months of Proof Partner signing. The institutional channel (House + Wrapped) requires 12–18 months of active relationship development before commercial terms are possible. The raise funds that cycle without compromising the pace of boutique traction.

Exit path: As Vektor scales across multiple deployment models and the OpenWealth credential translates into live Wrapped partnerships, InvestPuppy will attract acquisition interest from custodian banks, wealth management platforms, and institutional portfolio management software consolidators — the same organisations that currently pay US\$200,000–US\$500,000 per year for the infrastructure Vektor replaces. Trade sale is the primary exit scenario. Timeline aligns with Year 4–5 revenue maturity.

"Honest by design."

10. Appendix — Delivery Models Reference

Three delivery models. One product. Methodology, signal generation, and audit trail identical in every deployment. The model name describes how Vektor is delivered and at what scale — not three different products.

Vektor : Boutique

Direct · boutique scale

Direct subscription. AUM-tiered annual fee. InvestPuppy manages infrastructure. Client holds their own data. DPA with every client. MAS TRM framework referenced.

Vektor : House

Direct · institutional scale

Direct subscription. Alloy Partners programme. Staged and gated. Standard cloud (InvestPuppy-managed) or hybrid deployment (identity vault on client infrastructure). InvestPuppy screens and selects partners.

Vektor : Wrapped

Intermediated · custodian banks

Licensed to custodian banks and wealth platforms for their EAM client base. Platform fee + per-mandate fee. InvestPuppy holds no EAM client PII — structural separation by design. Bank is the commercial counterpart.

Full delivery models reference: ip-three-delivery-models-v2.pdf (public distribution)
