01

The Two Marks

One company, two identities, one purpose.

This did not start with a brand strategy. It started with a conviction.

The people who built Vektor spent decades inside the system they are now trying to improve. Decades of working with tools that were either too expensive, too generic, or too opaque for the mandates they were managing. Decades of watching institutional-grade capability remain inaccessible to independent teams who needed it most.

The frustration was not theoretical. It was professional. And eventually it became a question that would not go away: there must be a better way. Not a better version of what existed. A genuinely different approach — one built by practitioners for practitioners, without the cost, the complexity, or the credibility performance that had made the existing tools what they were.

Vektor is that approach. InvestPuppy is the company that decided to build it. The two marks are not a brand architecture exercise. They are the honest representation of what this actually is: a serious platform, built by people who are not serious about sounding like everyone else.

Vektor by InvestPuppy. Two names. Two marks. One purpose.

Vektor is the platform: systematic, precise, built from the mathematics of magnitude and direction. InvestPuppy is the company: confident, irreverent, more interested in the quality of its work than the hyperbole of its messaging.

Neither mark explains the other. Each is complete on its own terms. Together they make a statement about the kind of firm this is: serious about portfolios, not serious about itself. Every element of both marks was chosen with the same precision as the platform they represent. Nothing is decorative.

VEKTOR	INVESTPUPPY
The product. Systematic portfolio management platform for listed equities.	The company. The people who built it and the conviction they built it with.

Geometric wordmark. Custom asymmetric V. Gold arrowhead. Termina Bold. Dark ground. Institutional register.	Illustrated mark. Dog outline. Stock chart arrow. Split wordmark: Invest in platinum, Puppy in green. Approachable register.
Leads every commercial document and platform interface.	Appears as the maker's attribution on all Vektor materials.

The brand architecture is strict: Vektor leads every application. InvestPuppy appears beneath it as a maker's mark — authoritative, declarative, contextualising without competing. BY INVESTPUPPY at one-quarter the cap height of VEKTOR is not a sub-brand treatment. It is a stamp.

Serious when it matters.

02

Why Vektor

A word that earns its place.

The name was not chosen for memorability alone — though it achieves that. It was chosen because it encodes the platform's core proposition in a single word.

THE MATHEMATICAL ORIGIN

In mathematics, a vector is a quantity defined by two inseparable properties: magnitude and direction. It is not enough to know how much force is applied — you must know where it is going. A vector without direction is just a number. A vector without magnitude is just a guess. Together, they define a precise, actionable quantity. A well-constructed portfolio strategy requires exactly the same two things: capital weight and signal direction. Vektor encodes both into its name.

THE DELIBERATE SPELLING

We chose Vektor with a K, not Vector with a C. This is not affectation — it is a considered brand decision with three specific consequences: distinctiveness in a crowded fintech namespace, trademark clearance from the many Vector-named entities already registered globally, and a signal — subtle but present — that this product was built with precision and intention rather than assembled from defaults. The K is a small difference that carries a clear message: we do not do things the default way.

THE NAMING SHORTLIST

Name	Why set aside
WealthAdvisor	Generic to the point of invisibility. Describes a human role, not a technology platform. Almost certainly trademarked multiple times over.
InvestLens / InvestScope	Both carry the InvestPuppy prefix, partially defeating brand separation. Both imply observation rather than action — neither implies the decisiveness that systematic execution requires.
Axiom	Strong mathematical authority, but already present in financial services in multiple contexts. The rigour is right; the availability is not.
Lattice	Intellectually precise but collision risk with an established HR SaaS platform of the same name made it problematic in enterprise sales contexts.

03

The InvestPuppy Mark

The maker's brand.

InvestPuppy is an unconventional name for a company building institutional-grade financial infrastructure. It was chosen deliberately. The name is a filter: if it makes you curious, you are probably our kind of client. If it makes you uncomfortable, other, more traditional vendors are available.

We are serious about portfolios. We are not serious about ourselves. That is the distinction the mark is built on.

Serious when it matters.

A panel of UK institutional practitioners — including a senior discretionary portfolio manager (£400M book, 32 mandates), a McKinsey senior manager in fintech, a former investment banking MD with eleven fintech investments, a financial services copywriter, and an institutional fintech editor — reviewed the brand positioning. Their conclusion was unanimous: **the name is an asset, not a liability — when owned with conviction.** Memorability is a commercial mechanism. Polarisation is segmentation working correctly. The name is recalled when generic names are not.

THE ILLUSTRATION

The mark centres on a simplified dog face — rendered in single continuous outline strokes, clean geometry, no fill. It reads immediately as confident without being cartoonish. The construction discipline matches the Vektor wordmark: both marks are built from lines, not fills. Both are flat by specification.

Overlaid across the illustration is a stock performance chart: a V-shaped recovery to an upward trajectory, terminating in an arrowhead. This is the same directional signal as the Vektor arrowhead — not a coincidence, a system. The arrow carries a luminous spark at the arrowhead: the moment the signal fires. On dark backgrounds this renders as a visible glow. It is the one moment of energy in an otherwise controlled illustration.

THE WORDMARK SPLIT

'Invest' is rendered in platinum or near-white — the institutional context, the function, the serious half. 'Puppy' is rendered in the brand green — the differentiating half, the signal that this is not what you expected. The

split encodes the brand's duality in a single word: both serious and irreverent simultaneously, the colour making it legible at a glance.

THE FOUR VARIANTS

VARIANT	USE CONTEXT
Horizontal — Dark (IPHHorizontalClear)	Dog left, wordmark right. 'Invest' in near-white, 'Puppy' in green. Transparent background. Use on dark-background PDF footers and headers.
Vertical — Dark (IPVerticalClear)	Dog above, wordmark below. Transparent background. Use on dark-background cover pages where the mark has a standalone presence.
Horizontal — Light (IPHHorizontalInvClear)	'Invest' in solid black, 'Puppy' in green. Transparent background. Use on white-background Word documents and light PPTX slides.
Vertical — Light (IPVerticalInvClear)	'Invest' in solid black. Transparent background. Use on white-background cover pages and title slides.

DEPLOYMENT RULES

Commercial document covers

Horizontal dark variant. 38mm wide. Bottom-left, above the compliance line. Applies to: Brochure, At a Glance, Why Vektor, FAQ, Founding Mandate Programme.

Interior PDF footers (all dark-background documents)

Horizontal dark variant. 32mm wide. Left-aligned below the footer rule. Right-aligned companion: investpuppy.com · date.

White-background Word documents

Horizontal light variant. 'Invest' in black ensures legibility.

PPTX title slides

Vertical light variant. Content slides: horizontal light variant in footer only.

White paper covers (WP-00 through WP-10)

Footer only — no cover mark. Technical documents for committed readers.

04

The Vektor Mark

A logo that is also a mathematical statement.

The Vektor wordmark is not a logo with a concept attached — it is a concept expressed as a logo. Every geometric decision maps directly to something the platform does. A designer reading the brief and a portfolio manager reading the mark should arrive at the same understanding.

THE V — ASYMMETRIC BY DESIGN

The two strokes of the V are not equal. The left arm is visibly heavier — a thick, structural stroke representing the weight of capital deployed. It is the magnitude component of the portfolio equation: how much is committed, and with what conviction. The right arm is lighter and longer, extending past cap height before terminating in the arrowhead. It represents the signal, the trajectory, the algorithmic direction that determines where capital moves.

Heavy left stroke	Lighter right stroke
Capital magnitude. The weight of capital deployed — how much is committed, and with what conviction.	Signal direction. The trajectory that determines where capital moves — the algorithmic instruction that drives the position.

Asymmetry in a letterform is unusual enough to register subconsciously. A quantitatively literate reader sees the vector duality immediately. A reader without that background feels authority without being able to name the source. The mark works for both audiences simultaneously.

THE ARROWHEAD — NOTATION, NOT DECORATION

In vector mathematics, a quantity is denoted by placing a right-arrow above the variable name. The arrowhead integrated into Vektor's right stroke is that notation, realised as a structural element of the letterform itself — not placed above the letter as a diacritic, but growing from the stroke as its natural terminus. One continuous object. One continuous intention.

Open, not filled	Integrated, not placed	Gold, not platinum
A filled triangle reads as a decorative chevron. An open arrowhead reads as notation — precise, technical, a different register.	The arrowhead is the natural terminus of the V's right stroke. It grows from it — one continuous object, one continuous intention.	Gold applied everywhere is decoration. Gold applied once — to the directional element only — is meaning.

THE TYPEFACE — GEOMETRIC WITHOUT COMPROMISE

The EKTOR letters are specified in Termina Bold — a pure geometric sans-serif with flat-cut stroke terminals, uniform stroke weight, and no humanist characteristics. Termina was chosen because its construction language matches the V's architecture precisely: both are built from geometry, not calligraphic tradition. The result is a wordmark where the custom-drawn V and the typeset EKTOR feel as though they came from the same hand.

The K in EKTOR carries an additional function: its diagonal strokes, drawn at the same angular sharpness as the arrowhead geometry in the V, create a quiet internal rhythm across the wordmark — a detail that rewards close reading without announcing itself.

05

The Colour System

Three colours. Each one earns its place.

The palette was not assembled — it was specified. Each colour has a defined role and a defined rule governing where and how it appears.

NEAR-BLACK	PLATINUM	AMBER GOLD
#0A0A0F	#E8E8EC	#C8A96E
Primary background. Canonical dark ground.	Primary mark colour. All letterforms.	Accent. Arrowhead strokes only.

Colour discipline note: The single-application rule for gold applies specifically to the primary mark — the wordmark itself. In document and communications applications, gold functions as a structural accent to signal directional elements: the Founder's Note bar, hex references, and the closing page rule. This mirrors the arrowhead's function in the mark — gold appears where something specific is being signalled, and nowhere else.

THE COLOUR RULES

Gold appears once in the primary mark.

In the canonical dark-ground wordmark, the gold accent is applied to the arrowhead strokes only. Not to the V. Not to EKTOR. Not to the sub-brand. The moment gold appears on more than one element, it loses its function as a signal and becomes decoration.

The dark ground is canonical.

Near-black is the primary application. The light-ground version exists for print and document contexts but is always secondary. Vektor presents itself in darkness because that is where precision instruments live: trading terminals, portfolio dashboards, technical interfaces.

No gradients. No dimensional effects. No shadows.

The mark is flat by specification, not convention. Gradients imply softness. Vektor implies structural rigour. A flat mark reproduced consistently across every application is more powerful than a rendered mark that varies by medium.

06

The Brand in Practice

What both marks do in a room.

A brand is not what it says about itself. It is what it makes a reader feel in the first three seconds before any claim has been evaluated. These are the specific responses the Vektor and InvestPuppy marks are designed to produce at each stage of a professional engagement.

When the document lands on a desk

The cover — dark ground, Vektor mark prominent, gold arrowhead, InvestPuppy mark bottom-left as maker's attribution — produces one instinctive response: this is not a consumer product. Both marks are present from the first second. The relationship between them is legible before a word has been read.

When the Vektor mark is examined closely

The asymmetric V rewards attention. A quantitatively literate reader sees the vector notation immediately. A reader without that background feels the precision without naming it. The mark does different work for different audiences simultaneously, and correctly for both.

When InvestPuppy is noticed for the first time

The prospect who notices the maker's mark and pauses is the target audience. The name produces a moment of curiosity. That moment is the beginning of the commercial relationship. Platforms that produce no reaction are forgotten in twenty minutes. Vektor by InvestPuppy is recalled when it matters.

When the name is mentioned in conversation

Vektor is pronounceable in every major language, short enough to anchor in memory after one hearing, and correctly spelt after one reading. InvestPuppy is recalled in referral conversations precisely because it is unexpected. "Have you met the InvestPuppy team?" is a better sentence than any name chosen to sound institutional.

When it appears in a due diligence document

'Platform: Vektor' on a vendor questionnaire reads as a system name, not a company name. It has the right register for compliance documentation without requiring explanation. By InvestPuppy, when it appears, reads as a manufacturer's designation rather than a consumer brand.

The K distinguishes the mark in a crowded namespace and signals intentionality. The asymmetric V encodes the magnitude-direction duality into the letterform. The gold arrowhead is the vector notation symbol realised as a single geometric stroke. The InvestPuppy mark signals that the people behind the platform are more

interested in the quality of their work than the hyperbole of their messaging. Both marks are complete on their own terms. Together they say something neither could say alone: that serious work and serious character are not in tension — that one is the evidence of the other.

Every element earns its place. Nothing is decorative.
