

INTERNAL REFERENCE

Outstanding Panel Recommendations Register

Deferred items from Stages 1–4 panel reviews — to be addressed as a separate exercise.

INTERNAL USE ONLY — NOT FOR DISTRIBUTION

May 2026

PURPOSE OF THIS DOCUMENT

This register captures every panel recommendation from Stages 1–4 that was explicitly deferred rather than implemented. Items fall into two categories: those blocked by platform changes that must occur before any document work is possible, and minor document/suite polish items noted for the next update cycle. No item here reflects a gap in what has been distributed — all Tier 1 and Tier 2 items from Stage 4 have been implemented. This register is the complete audit trail of what remains.

SECTION 1 — PLATFORM CHANGES REQUIRED

Items blocked by platform or application changes.

The following four issues are visible in the platform UI screenshots embedded in the brochure. None can be resolved through document editing alone — the platform must be updated first, then all affected screenshots retaken, then the brochure rebuilt. All four can be addressed in a single screenshot retake session once the platform changes are made.

P-01	Admin portal still branded as “InvestPuppy Admin Portal”	PLATFORM
The admin portal header displays “InvestPuppy Admin Portal” across all authenticated screens. Every brochure screenshot showing the logged-in interface carries this label, creating a brand inconsistency between the document suite (which uses Vektor throughout) and the platform itself. All eight portal screenshots are affected. Trigger: Platform UI rebrand: change portal header to “Vektor” or “Vektor by InvestPuppy” Affected: Brochure screenshots: sc04 through sc11 (8 of 11 screenshots)		

P-02	Tan Chow Pin credentials visible in all logged-in screenshots	PLATFORM
The name “Tan Chow Pin” appears in the top-right user profile area of all authenticated portal screenshots. This is a real or test-account name that should not appear in distributed materials. All screenshots showing the authenticated portal header are affected. Trigger: Retake all portal screenshots under a neutral/anonymised test account (e.g. “Test Account” or a role-based label) Affected: All authenticated brochure screenshots: sc04 through sc11		
P-03	NaN% displayed in strategy view screenshot	PLATFORM
Screenshot sc04_strategy.png (the SGP Equity Strategy admin view) shows one or more metric fields displaying “NaN%” — a rendering error where a percentage calculation produced a non-numeric result. This is visible in the distributed brochure and undermines confidence in the platform’s calculation reliability at a critical first-impression moment. Trigger: Investigate and fix the NaN% calculation bug in the strategy view; retake sc04 Affected: vektor-brochure.pdf (Step 05, strategy admin screenshot)		
P-04	KYC PENDING status shown alongside KYC ACTIVE in client management	PLATFORM
Screenshot sc05_clients.png (the customer management view) shows clients with both KYC ACTIVE and KYC PENDING status. While mixed status is operationally accurate for a test environment, the PENDING entries alongside ACTIVE entries in the same screenshot creates an inconsistent impression for a reader evaluating platform maturity. A clean screenshot showing only fully onboarded clients would be more appropriate for marketing materials. Trigger: Retake sc05 showing a client list with consistent KYC ACTIVE status across all entries Affected: vektor-brochure.pdf (Step 06, customer management screenshot)		

Downstream work once P-01 through P-04 are resolved: retake all 11 brochure screenshots in a single session, update the screenshots/ folder in INTERNAL — Do Not Distribute / BUILD-SCRIPTS, run build_brochure.py, and repackage the ZIP. The build script requires no changes — it reads from the screenshots/ folder by filename.

SECTION 2 — DOCUMENT SUITE

Minor document changes noted for the next update cycle.

D-01	Brand build specification: “[NEW]” label on FMP build step will become stale	DOCUMENT
Section 07 of the Brand & Build Specification lists build_founding_mandate.py with a [NEW] annotation in the build order. This label was added to highlight the FMP as a new addition to the suite. As time passes the label becomes misleading — the FMP is no longer new. Trigger: Next update cycle: remove the [NEW] annotation from step 6 in Section 07 build order Affected: vektor-brand-build-specification.pdf + .docx		
D-02	WP-03 PDF: three platform screenshots carry the P-01 through P-04 issues	DOCUMENT
WP-03 (Capital Allocation Precision) embeds three screenshots from the allocation workflow: the full allocation breakdown, the portfolio positions view, and the order confirmation. All three will carry the “InvestPuppy Admin Portal” label and Tan Chow Pin credentials once P-01 and P-02 are fixed. WP-03 requires a screenshot retake and PDF rebuild concurrent with the brochure work. Trigger: After platform changes (P-01, P-02): retake WP-03 screenshots and rebuild wp03-capital-allocation.pdf Affected: wp03-capital-allocation.pdf (pages 3–5)		
D-03	WP-07 technical architecture diagram: reflects dev environment, not production	DOCUMENT
The architecture diagram in WP-07 accurately reflects the current AWS deployment but is explicitly a dev environment. Once the platform is promoted to production (a defined trigger in the risk roadmap), the diagram will need updating to reflect the production architecture, including any observability, RBAC, and monitoring components added at that stage. Trigger: After production environment promotion: update architecture diagram and rebuild WP-07 Affected: wp07-technical-architecture.pdf (Section 3 architecture diagram)		
D-04	Brand Story PDF — no build script, predates brand declaration, no footer mark	DOCUMENT

The Brand Story document (vektor-brand-story.pdf) was built externally and has no Python build script in the suite. It is carried as a static file across vk2 and vk3 without updates. It predates the “The InvestPuppy Question” brand declaration developed in vk3, does not carry the InvestPuppy footer mark, and may contain copy that is out of step with the brand position now established in Why Vektor. It is the only external commercial document without a build script and the only one without the vk3 footer standard.

Trigger: Create a build_brand_story.py script; align copy with the brand declaration; apply footer mark. Treat as vk4 first-pass item.

Affected: vektor-brand-story.pdf (all pages)

SECTION 3 — STRATEGIC & PRODUCT

Items that require a product or brand direction decision before any document work is appropriate.

S-01	InvestPuppy website: replace mailto contact with a waitlist capture form	STRATEGIC
	The current InvestPuppy placeholder website uses a mailto: link as its primary CTA. Every document in the suite directs prospects to investpuppy.com. A prospect who follows that link and finds a mailto: CTA rather than a form loses context and creates friction at the critical conversion moment. Replacing the mailto: with a waitlist or enquiry form was flagged by all five experts as the highest-priority, lowest-effort improvement to the overall distribution infrastructure. It does not require any document changes — only a website update. Trigger: Product decision: choose waitlist platform (e.g. Mailchimp, Typeform, custom); implement before any Founding Mandate outreach begins Affected: investpuppy.com (no document changes required)	
S-02	Brand identity tension: InvestPuppy name vs institutional positioning	STRATEGIC
	The panel identified a tension between the InvestPuppy brand name — which reads as approachable, consumer-facing fintech — and the institutional target audience of the Vektor product. The current positioning resolves this deliberately: InvestPuppy is the maker’s mark, Vektor leads. The Brand Story’s Founder’s Note addresses the question directly. However, this is a strategic question that remains open — the panel noted it as an unresolved tension rather than a settled decision. No document changes are appropriate until a position is taken. Trigger: Strategic decision: confirm or revise the InvestPuppy / Vektor brand hierarchy before any institutional distribution at scale Affected: Affects all documents at the brand level if the decision changes	

SECTION 4 — PRODUCT & FEATURE SUGGESTIONS

Panel suggestions requiring new platform capabilities or new documents.

These items were raised by the five-expert panel across Stages 1–4 as gaps in the platform's described capability. They are distinct from the document-level fixes above: each one requires either building a new platform capability or creating a new document to address a question the suite does not currently answer. They are captured here as product development inputs rather than document corrections.

PR-01	Portfolio lifecycle and ongoing portfolio management — rebalancing, drift triggers, corporate actions	PRODUCT
The document suite describes portfolio construction in depth but is entirely silent on what happens after initial allocation. There is no description of drift monitoring, rebalancing triggers, threshold-based rebalancing, or corporate action handling. The Workflow Integration Guide has no row for “Monitor and rebalance an existing portfolio.” The impression created — whether accurate or not — is of a platform that builds a portfolio and then leaves the DPM to manage it manually thereafter. For a DPM evaluating a portfolio management platform, ongoing lifecycle management is as important as initial construction. A platform that addresses only construction is, in the panel's framing, a research tool rather than a DPM operating platform. Trigger: Build rebalancing and drift monitoring capabilities; update Workflow Integration Guide and brochure to reflect the complete lifecycle. Alternatively, scope explicitly as a near-term roadmap item with a defined trigger condition. Affected: Platform Brochure, Workflow Integration Guide, WP-09 risk roadmap table		
PR-02	Multi-mandate isolation — how client mandates are separated in multi-family and multi-client contexts	PRODUCT
The suite describes the three-role workflow for a single mandate in detail. It does not describe how multiple simultaneous client mandates are isolated from each other — how cross-contamination of data or strategy parameters is prevented, how conflicting client instructions are handled, or whether a PM can accidentally apply strategy A's parameters to client B's mandate. For a multi-family office managing twelve families, or a DPM running multiple client portfolios, this is a primary operational and compliance requirement. The panel noted it is completely absent from all commercial documents, the research series, and the workflow integration guide. Trigger: Document the current multi-mandate isolation architecture explicitly. If physical separation does not yet exist, state the current logical isolation approach and the migration path. Affected: Platform Brochure, WP-06 (Audit & Compliance), WP-07 (Technical Architecture)		

PR-03	No evidence layer — quantitative performance claims with no backtested or simulation evidence	PRODUCT
The suite makes specific quantitative claims — 99.94% capital allocation efficiency, per-instrument Sharpe improvement over universal signals, efficient frontier optimisation selecting the max-Sharpe allocation. None of these claims are supported by backtested data, simulation outputs, or worked examples with actual numbers. The intellectual methodology is presented thoroughly. The empirical case is entirely absent. WP-10 teaches readers how to evaluate a systematic strategy's performance but provides no strategy performance data to evaluate. For an institutional investor making a Founding Mandate commitment, the absence of any performance evidence is a structural gap that the suite does not address. Trigger: Add at minimum one worked backtest or simulation output with appropriate caveats to WP-01 or WP-10. Even a hypothetical example with fully disclosed assumptions gives a prospect something concrete to evaluate. Affected: WP-01 (Portfolio Construction), WP-10 (Evaluating Performance)		
PR-04	Role permissions matrix — what each role can initiate, approve, and execute today	PRODUCT
The suite describes the three-role model (Stock Analyst, Portfolio Manager, Operations) at a structural level across multiple documents. It does not specify what each role can and cannot do in the current platform. What prevents a PM from approving their own strategy in the current implementation? Can the same individual hold two roles? What does the Analyst see that the PM does not? For any institutional client with compliance obligations, the operational implementation of the role model — not just its structural description — is due diligence material. The panel rated this as Critical in the WP-07 review and Important at the suite level. Trigger: Document the current permissions in a role matrix table. Acknowledge the maker/checker limitation (PM can currently assign directly) explicitly in WP-06 and the brochure, not only in WP-07. Affected: WP-06 (Audit & Compliance), WP-07 (Technical Architecture), Platform Brochure		
PR-05	Competitive positioning — suite positions against Bloomberg PORT, not against Excel	PRODUCT

The Why Vektor document identifies three inadequate alternatives: Excel-based allocation, institutional quant platforms (Bloomberg PORT, FactSet), and retail robo-tools. The institutional platforms are named as the comparison point for price and complexity. But Bloomberg PORT and FactSet are not the actual competitive consideration for most of the target audience — boutique DPMs and family offices cannot afford them and are not evaluating them. The actual alternative most prospects are weighing is Excel, a customised in-house model, or no systematic tool at all. Positioning against an out-of-reach platform makes the comparison feel aspirational rather than practical. Positioning against Excel — the real status quo — is more commercially resonant and easier to win.

Trigger: Rewrite the competitive section of Why Vektor to make Excel the primary comparison point. Keep Bloomberg PORT as a reference for price benchmarking only.

Affected: Why Vektor (commercial), Deck 1 (60-Minute Meeting)

PR-06 **Implementation and onboarding process — the “we’ve been burned before” objection is unaddressed**

PRODUCT

Every sophisticated family office and DPM principal has a story about a vendor that over-promised and under-delivered on implementation. The document suite builds intellectual confidence thoroughly but does not address operational confidence: what does onboarding look like, what is the implementation timeline, what support is available during setup, and what happens if something goes wrong post-launch? The Founding Mandate programme is presumably the answer to this — early partners get direct founding-team access and a more hands-on onboarding. But since the Founding Mandate programme has not been fully defined in any document, this reassurance is not currently available to a prospect reading the suite.

Trigger: Define the onboarding and implementation process as part of the Founding Mandate Programme document. At minimum add an FAQ answer: Q13. What does implementation look like and what support is available?

Affected: Founding Mandate Programme (IP-FMP-260501-1.0), FAQ

PR-07 **Day-in-the-life operational narrative — what Monday morning looks like on a Vektor desk**

PRODUCT

The suite excels at describing what Vektor is and how it works architecturally. It does not describe what it is like to operate Vektor as a daily working tool. No document answers the question a DPM will ask in their head throughout the reading process: “What does my day actually change?” The Workflow Integration Guide comes closest with its Replaces/Augments/Unchanged table but stops at the task level. A short narrative — one or two pages — describing a typical strategy build cycle from the PM’s perspective, and the ongoing weekly rhythm of monitoring and review, would translate the architecture into operational reality more effectively than any technical document currently in the suite.

Trigger: Add a “A Day on a Vektor Desk” section to the Workflow Integration Guide, or as a standalone one-pager for use at Stage 3 of the sales journey.

Affected: Workflow Integration Guide, or new standalone document

PR-08	Founder biography and voice absent from all commercial documents	PRODUCT
	No founder biography, founder note, or personal voice appears anywhere across the commercial or research documents. Both the original Singapore panel and the UK panel flagged this explicitly: at pre-revenue stage, founder credibility is a primary trust signal. The intellectual rigour of the suite builds confidence in the methodology but provides no signal about the people behind it. The Founding Mandate Programme and Why Vektor are the natural homes — not a full biography, but a paragraph of personal voice that makes the founder visible and gives a prospect someone to trust before they have met anyone from the team. Trigger: Add a brief founder note (4–6 sentences, first person) to Why Vektor and the Founding Mandate Programme. Not a CV — a voice. Affected: Why Vektor (page 2), Founding Mandate Programme (introduction)	

SECTION 5 — UK MARKET ENTRY

Items required before distribution to UK prospects or FCA-regulated firms.

The UK panel convened for the vk3 review identified a specific set of items that must be addressed before the document suite is distributed to any UK-based prospect or FCA-regulated firm. These items do not affect Singapore distribution and are not defects in the existing suite — they are jurisdiction-specific additions required for the UK market context. UK-01 is a distribution blocker. UK-02 through UK-04 are significant but not immediate blockers.

UK-01	FCA regulatory context entirely absent from commercial documents — UK distribution blocker	UK ENTRY
The complete commercial document suite — brochure, FAQ, Why Vektor, Founding Mandate, Workflow Integration Guide — contains no reference to the FCA, Consumer Duty, or any UK regulatory framework. UK wealth managers and DPMs operate under FCA obligations and will immediately notice the omission. The panel rated this as a unanimous blocker: no UK prospect distribution should occur until at minimum a FAQ question on UK regulatory considerations is added. A short UK regulatory annex to the Workflow Integration Guide is the fuller solution. Trigger: IMMEDIATE: Add FAQ Q14 addressing UK regulatory context (FCA standing, Consumer Duty, applicable permissions). Consider a short UK regulatory annex to Workflow Integration Guide. Affected: FAQ (new Q14), Workflow Integration Guide (new UK annex)		
UK-02	Yahoo Finance as default data source creates FCA compliance friction	UK ENTRY
Yahoo Finance is the default data source stated in the commercial documents and FAQ. For FCA-regulated UK firms, Yahoo Finance as an institutional data source will generate immediate compliance questions — data quality obligations, audit trail requirements, and vendor risk assessments all apply. The suite notes that institutional feeds are configurable but this appears only in the technical white papers at low prominence. A clear, commercially-facing statement of the institutional data feed pathway (Bloomberg, Refinitiv, ICE) with an onboarding route needs to appear in the brochure and FAQ before UK DPMs review these materials. Trigger: Add explicit institutional data feed pathway to Platform Brochure (data section) and FAQ Q6. Reframe Yahoo Finance as the development/demonstration default, not the production default for regulated clients. Affected: Platform Brochure (data source section), FAQ Q6 (What data does Vektor use?)		
UK-03	UK competitive landscape absent — Bipsync, Objectway, Iress, Figaro by Dorsum unmentioned	UK ENTRY

The competitive landscape in Why Vektor names Bloomberg PORT and FactSet as the institutional alternatives. A UK prospect — particularly one in the DPM or wealth management space — will be aware of UK-specific competitors that are entirely absent from the document: Bipsync (portfolio management and research), Objectway (wealth management platform), Iress (widely used across UK wealth and DPM), and Figaro by Dorsum (systematic portfolio construction). The absence signals either unfamiliarity with the UK market or a competitive landscape written for a different geography. A targeted UK competitive section addressing these vendors is required for credible UK positioning.

Trigger: Add a UK-specific competitive landscape paragraph to Why Vektor addressing Bipsync, Objectway, Iress, and Figaro. Position Vektor's differentiation in each case.

Affected: Why Vektor (competitive landscape section, page 3)

UK-04 No UK data residency or deployment pathway documented

UK ENTRY

The suite describes AWS ap-southeast-1 (Singapore) as the current deployment region and notes the architecture is region-agnostic. FAQ Q8 addresses Singapore data residency. No equivalent statement exists for UK data residency requirements. UK firms with FCA obligations around data location, GDPR/UK GDPR compliance, and cloud vendor risk will require a clear statement of the UK deployment pathway — specifically AWS eu-west-2 (London) deployment, UK GDPR applicability, and the migration process from the current Singapore instance. Without this, a UK firm's compliance team will block evaluation before it reaches the investment or operations team.

Trigger: Add FAQ Q addressing UK data residency and deployment. Update WP-07 architecture section with a note on UK/EU regional deployment pathway.

Affected: FAQ (new question on UK data residency), WP-07 Technical Architecture

REGISTER SUMMARY

ID	ITEM	ACTION	STATUS	WHEN
P-01	Admin portal branded as "InvestPuppy Admin Portal"	Platform rebrand	PLATFORM	Before any further screenshot distribution
P-02	Tan Chow Pin credentials in all portal screenshots	Anonymise test account	PLATFORM	Before any further screenshot distribution
P-03	NaN% in strategy view screenshot	Fix calculation bug + retake	PLATFORM	Before Founding Mandate partner distribution
P-04	KYC PENDING/ACTIVE inconsistency in client screenshots	Retake with clean data	PLATFORM	Before Founding Mandate partner distribution
D-01	Brand spec [NEW] label on FMP build step	Remove annotation	DOCUMENT	Next update cycle (low urgency)

ID	ITEM	ACTION	STATUS	WHEN
D-02	WP-03 screenshots carry P-01/P-02 issues	Retake + rebuild	DOCUMENT	Concurrent with brochure screenshot retake
D-03	WP-07 architecture diagram: dev environment, not production	Update at production promotion	DOCUMENT	After production environment promotion
D-04	Brand Story PDF — no build script, no footer mark, predates brand declaration	Create build script; align copy; apply footer	DOCUMENT	vk4 first-pass item
S-01	investpuppy.com: mailto vs waitlist form	Implement form capture	STRATEGIC	Before Founding Mandate outreach begins
S-02	InvestPuppy / Vektor brand hierarchy tension	Strategic decision required	STRATEGIC	Before institutional distribution at scale
PR-01	Portfolio lifecycle: rebalancing, drift triggers, corporate actions absent	Build capability or scope roadmap	PRODUCT	Before DPM desk distribution
PR-02	Multi-mandate isolation not documented	Document architecture + isolation approach	PRODUCT	Before MFO / multi-client distribution
PR-03	No evidence layer — zero backtested or simulation data	Add worked backtest with caveats	PRODUCT	Before institutional DD distribution
PR-04	Role permissions matrix missing	Document what each role can do today	PRODUCT	Before any compliance review
PR-05	Competitive positioning targets Bloomberg PORT, not Excel	Rewrite Why Vektor comp section	PRODUCT	Before next commercial document update
PR-06	Onboarding process and implementation risk unaddressed	Define in FMP doc + FAQ Q13	PRODUCT	Before Founding Mandate partner outreach
PR-07	No day-in-the-life operational narrative	Add to Workflow Integration Guide	PRODUCT	Before Stage 3 sales meetings
PR-08	Founder biography and voice absent from all commercial documents	Add founder note to Why Vektor + FMP	PRODUCT	Before Founding Mandate outreach
UK-01	FCA regulatory context absent — UK distribution blocker	Add FAQ Q14 + UK regulatory annex	UK ENTRY	BEFORE any UK distribution
UK-02	Yahoo Finance creates FCA compliance friction for UK firms	Add institutional feed pathway to Brochure + FAQ	UK ENTRY	Before UK DPM distribution

ID	ITEM	ACTION	STATUS	WHEN
UK-03	UK competitive landscape absent — Bipsync, Objectway, Iress, Figaro	Add UK competitive paragraph to Why Vektor	UK ENTRY	Before UK distribution of Why Vektor
UK-04	No UK data residency or deployment pathway documented	Add FAQ question + WP-07 note	UK ENTRY	Before UK firm compliance review

22 open items: 4 PLATFORM (blocked by app changes), 4 DOCUMENT (next cycle), 2 STRATEGIC (awaiting direction), 8 PRODUCT (new capabilities or documents required), 4 UK ENTRY (required before UK market distribution — UK-01 is a distribution blocker). All vk3 Tier 1 and Tier 2 items have been implemented. This register is the complete outstanding work log.

Vektor by InvestPuppy · investpuppy.com · Internal use only · May 2026
